SKAPS INDUSTRIES

SKAPS Industries, a company founded in 1996, is based in the United States and is known around the world for manufacturing top quality geosynthetic products, fiberglass fabric and structural core material. We have eight locations worldwide. Our manufacturing facilities in Athens and Pendergrass, GA produces nonwoven geotextiles for use in civil and environmental applications.

SKAPS's netting division is located in Commerce, GA and all of the SKAPS netting products are manufactured at this location. This division has ten state of the art extrusion lines and it is a 500,000 square feet manufacturing, warehousing and storage facility. SKAPS produces various netting products for produce, meat and poultry, civil and environmental construction markets. We have tapped into several netting product lines across various market segments. This multi-faceted approach has helped us refine our products, processes and our knowledge base.

1. PRODUCE NETTING:

SKAPS has a variety of solutions for your produce packaging needs. SKAPS netting is available in a rainbow of colors to help meet your packaging needs. SKAPS netting conforms to the product being packaged and is temperature resistant. The open mesh design of SKAPS netting promotes air circulation, reduces condensation and eliminates fogging associated with polyethylene bags. The resulting package is visually attractive, easy to handle and an economically viable solution for your packaging needs.

1.1 Extruded Flat Netting

SKAPS manufactures extruded flat netting and extruded tubular netting which are used to make vertical bags that can stand upright and provide better product appearance. These bags can also have punched fingers in the header or a carry handle. Our extruded netting is an excellent replacement for knitted netting and CLAF material. It comes in a variety of widths, lengths, colors and is available in roll stock.

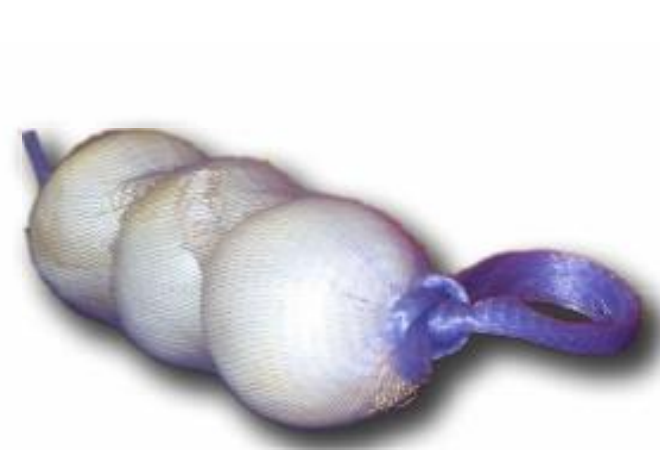

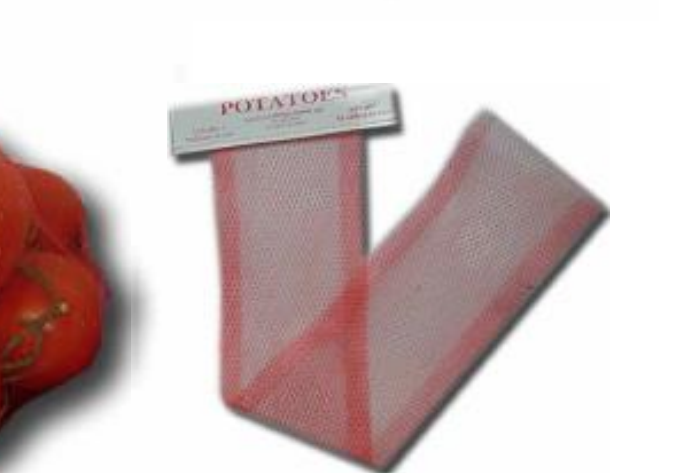

1.2 Oriented Tubular Netting

SKAPS manufactures oriented tubular netting for fully automated and semi-automated machines to package products such as onions and citrus. Our netting is available in roll stock in various lengths, widths and mesh sizes. It can be used for full bags that are heat sealed or clipped and for a variety of other packaging needs. Our netting can be used to make header bags, with communication labels or standard header labels, which offer excellent product visibility and promote shelf awareness. It can also be used on fully automated header bag machine that makes, fills and closes the header bag automatically.

Oriented Tubular Netting

2. CONSTRUCTION NETTING:

SKAPS manufactures a tubular oriented heavy-duty netting which is used in the construction industry as a part of a geosynthetic aggregate pipe system for use in septic leach fields and drainage systems. This superior quality netting ensures maximum system life and performance. It is offered in various widths, lengths, colors and comes in roll stock.

3. MEAT & POULTRY NETTING:

SKAPS manufactures an open mesh and heavy duty oriented tubular netting which is used in the food industry for packaging turkey, ham and other meat products. This netting is made from superior quality polyethylene material and comes in a variety of widths, lengths and colors.
